**Siemens Digital Industries Software**

**Cairo, Egypt**

Dear Hiring Committee,

I am writing to apply for the DevOps Engineer Internship on the DVT team at Siemens Digital Industries Software. As a senior Computer and Systems Engineering student at Ain Shams University with hands-on experience in Linux environments, CI/CD pipelines, and containerized deployments, I'm excited by the opportunity to contribute to Siemens' infrastructure and automation efforts this summer.

During my internship at Link Development, I worked with Docker and Spring Boot, integrated SQL databases, and applied monitoring and logging using Logstash and Kibana. I also deployed deep learning models using Docker and Azure services during my role at Nature Eye Labs, which gave me firsthand experience in managing scalable systems and understanding the importance of reliability and automation.

I'm well-versed in DevOps concepts, familiar with Jenkins pipelines, and comfortable writing and debugging scripts in Bash and Python. I thrive in Linux-based workflows, and my previous projects have prepared me for tasks such as Docker image management, service monitoring, and infrastructure debugging. I value collaboration and enjoy problem-solving in fast-paced environments.

Joining Siemens means contributing to critical tooling and infrastructure behind world-class software products. I'm eager to learn from experienced mentors and bring my energy and skills to your DevOps team.

Thank you for considering my application.

**Sincerely,**

**Ahmed Sallam**
